

Vijaya Kumar Katta

Technical Architect | Java Full Stack Engineer | Cloud & Microservices | AI/ML

📍 Tampa, FL, USA 📞 +1-813-841-2363 ✉ katta.vijayk@gmail.com

🌐 <https://www.linkedin.com/in/kattavijay/>

PROFESSIONAL SUMMARY

Results-driven Technical Architect with 15+ years of experience across the full software development life cycle from requirements and architecture through delivery, scaling, and maintenance of enterprise-grade applications. Deep hands-on expertise in Java/Spring Boot microservices, AWS cloud-native architecture, and modern full-stack development with React and Node.js. Proven leader at Fortune 500 organizations including JPMorgan Chase, Cognizant/Verizon, and TCS, consistently delivering high-impact, secure, and scalable solutions. Equally comfortable as an individual contributor writing optimized code as in leading cross-functional engineering teams of 10+ engineers and actively leverages AI-assisted development tools including GitHub Copilot and Claude AI to accelerate architecture design, code generation, code review, and technical documentation.

CORE COMPETENCIES

• Java / Spring Boot / Microservices • AWS Cloud Architecture & Security • Docker, Kubernetes, Containerization • Reactive / Event-Driven Architecture	• React.js / Angular / Node.js Full Stack • CI/CD: Jenkins, Terraform, GitLab • Oracle, MySQL, MongoDB, Redis • REST / GraphQL / SOAP API Design	• AI/ML: Python, SageMaker, TensorFlow • Agile, SAFe 5, Scrum Master • Security, PII Encryption, IAM/Cognito • Team Leadership & Cross-Org Alignment
--	--	--

PROFESSIONAL EXPERIENCE

Technical Architect

June 2025 – Present

Infinite Computer Solutions (Client: Verizon) Tampa, FL

Project: Multi-Brand Walmart Super SKU, Revolutionizing the in-aisle retail experience through full decision-tree capabilities across all brands using a uniform SKU, enabling customers to choose any device and pair with any brand and rate plan across 450+ Walmart stores.

Stack: Java / Spring Boot, AWS (Lambda, API GW, S3), MySQL, Jenkins, GitLab, ReactJS, GitHub Copilot

- Act as the primary architecture bridge between Verizon, Walmart IT, and cross-functional engineering and product teams, ensuring alignment across business, design, and technology stakeholders.
- Designed the end-to-end technical architecture for the Uniform SKU solution — including backend microservices in Spring Boot, AWS-hosted APIs, and front-end decision-tree UX flows.
- Oversaw the AI Digital Assistant development pipeline, ensuring the assistant integrates seamlessly with device activation flows and customer experience touchpoints.
- Led fixture redesign strategy at Walmart to incorporate digital and technical in-aisle components, coordinating with hardware vendors and Walmart operations teams.
- Validated technical feasibility of all proposed features against given timelines, budgets, and existing infrastructure constraints; flagged and mitigated risks proactively.
- Established security and compliance standards across all integrations, meeting Walmart and Verizon privacy and regulatory requirements.
- Designed the architecture to support horizontal scaling from the 450-store pilot to a full national rollout, with extensibility for future technology adoption.
- Drove Agile sprint planning and cross-team dependency management in a multi-vendor, multi-time zone delivery model.

Vice President – Lead Security Engineer

Feb 2023 – May 2025

JPMorgan Chase • Tampa, FL

Project: Assessment Central, A strategic, continuous control assessment platform supporting dynamic measurement of automated and manual controls, reducing assessment frequency while maximizing evidence reusability across multiple risk programs.

Stack: Java / Spring Boot, ReactJS, Node.js, AWS Lambda (Serverless), Gaia Cloud, MySQL, GitLab, Jules CI/CD

- Owned end-to-end development of RESTful microservices using Java/Spring Boot, deployed on AWS Lambda and Gaia Cloud environments.
- Architected and executed cloud migration from Gaia Cloud to AWS, improving platform scalability, cost efficiency, and operational resilience.
- Built dynamic front-end interfaces using ReactJS and Node.js, dramatically improving UI/UX for assessment teams and control owners.
- Designed the reusable evidence model, enabling assessment results to be shared and referenced across multiple control frameworks, reducing redundant work by ~40%.
- Coordinated with security architects, compliance teams, and platform engineers to ensure all services met JPMC's strict security and regulatory standards.
- Led sprint ceremonies, backlog grooming, and technical design reviews as part of a SAFe Agile delivery framework across 3 integrated teams.
- Implemented robust logging, monitoring, and alerting using AWS CloudWatch and custom dashboards for production observability.
- Mentored junior and mid-level engineers on REST design patterns, code quality standards, and secure coding practices.

Technical Architect

July 2014 – Jan 2023

Cognizant Technology Solutions (Client: Verizon and Citi) Tampa, FL

Led multiple high-priority Verizon and Citi engineering programs across an 8.5-year tenure, spanning cloud platform development, subscriber migration, and network services modernization.

Program 1: OneCloud 2.0 (July 2022 – Jan 2023)

Cloud navigation hub enabling teams to manage pre-onboarding reviews, consolidated information, and improved developer experience across multi-cloud environments.

Stack: Java / Spring Boot, ReactJS, Node.js, AWS Lambda, Redis, MySQL, GitLab, Jenkins

- Led full delivery lifecycle: requirements gathering, architecture design, development, and production deployment.
- Managed a team of 8 engineers, owning sprint planning, code reviews, escalations, and stakeholder reporting.
- Designed multi-reusable service components to minimize duplication across cloud onboarding workflows.
- Implemented serverless Lambda functions for event-driven processing, reducing infrastructure costs by ~30%.
- Built Redis-based caching layer improving API response times by over 60% for high-frequency onboarding lookups.

Program 2: Tracfone (Verizon Prepaid) Migration (Jan 2020 – June 2022)

Verizon's acquisition of Tracfone required migrating millions of prepaid subscribers from T-Mobile, AT&T, and other MNOs onto the Verizon platform across brands including Go Smart, Simple Mobile, Walmart Family Plans, and Safelink.

Stack: Java / Spring Boot (Reactive), ReactJS, Node.js, AWS, Kubernetes, GitLab, Jenkins, Redis

- Architected and led the migration of the Verizon prepaid UI from legacy systems to a modern ReactJS stack with new component libraries and improved performance.
- Implemented Spring Web Flux reactive services to handle high-throughput subscriber migration events without blocking I/O.
- Designed and implemented customer PII and credit card data encryption pipelines, ensuring PCI-DSS compliance across all migrated accounts.
- Built Kubernetes-orchestrated microservices enabling independent scaling of migration workloads per brand.
- Coordinated with T-Mobile and AT&T technical teams to ensure seamless API handoff during subscriber porting.
- Delivered migrations for 4 major prepaid brands ahead of schedule within a 6-sprint Agile release cycle.

Program 3: One Network Services (Aug 2015 – Dec 2019)

Major Verizon Network Services modernization initiative — replacing manual workflows with automated microservices for network order creation, fault path resolution, and customer trouble-ticket management.

Stack: Java / J2EE, Spring Boot, AngularJS, ReactJS, Node.js, AWS, PCF, JPA, Google Dialogflow, Jenkins, XML/JSON/YML

- Defined and implemented microservices architecture on Kubernetes, eliminating dependency on monolithic legacy systems.
- Developed REST controller layer, front-end components using ExtJS/React, and Spring Boot middleware services.
- Integrated Google Dialogflow to build a conversational AI chatbot for Level 1 network support — reducing ticket volume by ~25%.
- Established PCF (Pivotal Cloud Foundry) deployment pipelines and shift-left testing practices across the team.
- Authored technical design documents, participated in architecture review boards, and mentored 5 junior developers.
- Led scrum ceremonies and effort estimation for a 12-person engineering team across onshore/offshore time zones.

Program 4: Workforce Reporting (WFR) (July 2014 – Aug 2015)

Web-based workforce reporting tool for Citi Group senior management and HR, enabling on-demand reports exportable in PowerPoint and Excel formats.

Stack: Java, Struts, JSP, jQuery, Apache POI, Apache ANT, IBM WebSphere, Oracle, Eclipse

- Developed report generation modules supporting multi-format exports (Excel, PowerPoint) using Apache POI API.
- Built dynamic UI interfaces using JSP and jQuery, delivering an intuitive experience for non-technical HR users.
- Performed peer code reviews and mentored junior developers on J2EE best practices.
- Collaborated closely with QA team to identify, triage, and resolve production defects efficiently.

IT Analyst – Senior Lead Developer

Oct 2010 – June 2014

Tata Consultancy Services (Clients: CenturyLink, British Telecom) • Hyderabad, India

Project 1: Network Trouble Management System (NTMS) & Repair Dashboard (Oct 2013 – June 2014)

CenturyLink — Real-time network trouble management platform accepting test requests from QPortal and Technician GUIs, with integrated inventory and test interfaces and a director-to-supervisor repair dashboard.

Stack: Java, BMC Remedy, Struts, JSP, Apache POI, WebLogic 10.3, Oracle, Eclipse

- Provided technical and functional Java/Oracle support for Severity 1–4 production incidents on UNIX infrastructure.
- Managed deployment activities, log analysis, and error remediation in a high-availability telecom environment.
- Developed JUnit test cases and drove unit/integration testing; coordinated fixes with offshore team.
- Mentored newly onboarded team members as Tech Lead; led code reviews and knowledge transfer sessions.

Project 2: VLP – Voice Logical Provisioning (Nov 2011 – Sep 2013)

British Telecom — Web-based call routing provisioning tool for the Global Inbound Service (GIS), integrating with NOAS Intelligent Network node and Open Application Server (OAS) for scalable contact center routing.

Stack: GWT, EJB3, Hibernate, BOSS Seam, SS7, JBoss, TimesTen, Eclipse

- Developed and optimized call routing logic using GWT, EJB3, and Hibernate for real-time provisioning plan execution.
- Implemented business logic using BOSS Seam framework, integrating with NOAS IN Node for intelligent call handling.
- Designed GWT-based web provisioning UI for enhanced usability and responsiveness by provisioning managers.
- Integrated SS7 signaling protocols for real-time communication between the provisioning system and network infrastructure.

Project 3: ASC – Access Screening (Oct 2010 – Nov 2011)

British Telecom — Telecom-grade Intelligent Network service for real-time call screening, barring, and dynamic call routing, enabling Equal Access routing and fraud prevention.

Stack: Java, SS7, SIP, ISUP, CAMEL, Rhino Server, TimesTen, Eclipse

- Developed call screening and routing logic using Java and RESTful APIs for real-time high-volume call handling.
- Integrated SS7, ISUP, SIP protocols for seamless interoperability between BT network nodes.
- Designed Oracle/MySQL database schemas for call logs, traffic policies, and analytical insights.
- Built high-performance, scalable microservices architecture for call processing within the BT IN platform.

Application Developer / Software Engineer
Unistring Tech Solutions Pvt. Ltd. • Hyderabad, India

June 2007 – April 2010

Product development company — built enterprise web applications and SMS automation products from scratch.

- Designed and developed ASM (Automated SMS Management System): a web-based bulk SMS platform supporting Excel, database, and text-file driven mass messaging campaigns.
- Built full J2EE application stack using Servlets, JSP, Oracle 10g, and RS232 serial integration for SMS gateway connectivity.
- Delivered an end-to-end single SMS and bulk SMS management dashboard with customizable client configurations.
- Developed ASG (Attendance System for Government schools): a Java-based biometric attendance tracking system integrated with government databases.

TECHNICAL SKILLS

Languages	Java (J2SE / J2EE / Java 17+), Python, JavaScript, TypeScript, Go, SQL, PL/SQL, Shell Scripting
Frameworks	Spring Boot, Spring MVC, Spring Reactive (WebFlux), Hibernate, JPA, EJB3, Struts, BOSS Seam, GWT
Frontend	ReactJS, AngularJS, Node.js, HTML5, CSS3, JavaScript, AJAX, JSP, JSTL, ExtJS, DOJO, jQuery
Cloud & infra	AWS (EC2, S3, Lambda, RDS, DynamoDB, API Gateway, CloudFormation, IAM, Cognito, SageMaker, Rekognition, Comprehend, Textract, Transcribe), Azure, PCF (Pivotal Cloud Foundry), Gaia Cloud
DevOps & CI/CD	Docker, Kubernetes (K8s), Jenkins, Terraform, Ansible, GitLab CI, Artifactory, Maven, ANT
Databases	Oracle (10g, 11g, 19c), MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, Cassandra, TimesTen 11g
Messaging & APIs	REST, GraphQL, SOAP/WSDL, Apache Kafka, Microservices, SS7, SIP, ISUP, SNMP, JAIN SLEE
AI / ML	Python, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Google Dialogflow, AWS SageMaker, Rekognition
Security	PCI-DSS, PII Encryption, OAuth2, JWT, AWS IAM/Cognito, OWASP Secure Coding
Testing	JUnit 5, Mockito, TDD, Integration Testing, Postman, Swagger
Tools & IDEs	IntelliJ IDEA, Eclipse, STS, VS Code, Git, GitHub, GitLab, Bitbucket, Postman, Swagger, Apache POI, Crystal Reports
App Servers	Apache Tomcat, JBoss, IBM WebSphere, WebLogic 10.3, Rhino Server
Methodologies	Agile, SAFe 5, Scrum, Kanban, CI/CD, TDD, OOA/OOD, UML, MVC, DAO, Singleton, Factory Design Patterns
AI Dev Tools	GitHub Copilot, Claude AI, ChatGPT, AI-assisted code generation & review

EDUCATION

Master of Science in Data Science

2023 – 2025

Bellevue University, Bellevue, NE, USA

Coursework: Machine Learning, Deep Learning, Big Data Analytics, NLP, Data Visualization, Statistical Modeling

Bachelor of Technology (B.Tech) in Computer Science Engineering

2003 – 2007

Kakatiya University, Khammam, India

CERTIFICATIONS & TRAINING

• AWS Certified Cloud Practitioner • Certified SAFe® 5 Practitioner • Certified SAFe® 5 Advanced Scrum Master	• Data Science & Big Data Analytics – MITxPro • Oracle Certified Professional – Java EE 5 Web Component Developer (OCWCD) • Sun Certified Java Programmer (SCJP) 1.5
---	--

KEY ACHIEVEMENTS

- Verizon Tracfone Migration: Successfully led migration of millions of prepaid subscribers from competing MNOs (T-Mobile, AT&T) onto Verizon's platform across 4 brands, delivered ahead of schedule.
- JPMorgan Chase Cloud Migration: Architected and executed Assessment Central's migration from Gaia Cloud to AWS, improving scalability and reducing operational overhead.
- Dialog flow Chatbot at Verizon: Integrated conversational AI for Level 1 network support, reducing support ticket volume by approximately 25%.
- OneCloud Serverless Optimization: Transitioned OneCloud 2.0 workloads to AWS Lambda serverless architecture, cutting infrastructure costs by ~30%.
- Redis Performance Gains: Implemented Redis caching on high-frequency API paths, improving response times by over 60%.
- Security Leadership at JPMC: Drove PCI-DSS compliance and PII encryption standards across cross-functional engineering teams as Lead Security Engineer at VP level.
- Walmart Retail Innovation: Currently architecting a first-of-its-kind uniform SKU and AI Digital Assistant experience for Verizon devices across 450+ Walmart stores nationwide.
